

Thank you for requesting your chronic pain assessment from NevroHFX.com. We've also included a discussion guide below, that you can share with your physician. **Print and bring this guide with you to your next scheduled appointment.**

About you:

My pain score is:

I've been struggling with chronic pain for:

My pain is located in my:

I've already tried:

Take these questions to your physician:

- 1 Do you offer HFX Spinal Cord Stimulation at your practice?
- 2 Do you think I might be a good candidate for HFX?
- 3 What results have you seen with HFX?
- 4 What is the treatment process?
- 5 Is it safe? What are the possible side effects?
- 6 Will I be able to stop taking my pain medications?
- 7 How much pain relief should I expect?
- 8 How long will the pain relief last?
- 9 Will this help me be more active?
- 10 How many patients have you treated with SCS?

Rx Only Patient experiences with the Senza spinal cord stimulation (SCS) system vary by individual, including the amount of pain relief. The occurrence of adverse effects associated with SCS implant surgery or use also varies by patient. **Brief Summary:** A summary of important information follows. Please see <https://uat.hf10-hfx.staging.poundandgrain.ca/resources/safety-information> and the Senza Patient Manual (at <https://www.nevro.com/English/Patients/Patient-Overview/default.aspx>) for complete information. Please consult your doctor to fully understand Senza benefits and risks. **Indications for Use:** The Senza spinal cord stimulation system is an aid in the management of chronic intractable pain of the trunk and/or limbs, including unilateral or bilateral pain associated with the following: failed back surgery syndrome, intractable low back pain and leg pain. **Contraindications:** These include patients not fit for surgery. **Warnings/Precautions:** There are warnings or precautions against or regarding: Senza use in patients who are or may become pregnant; patients undergoing diathermy or with other active implanted devices, or those undergoing CT scans, ultrasound or other procedures, among others. **Adverse Effects:** Senza is implanted surgically, so surgical complications are possible, such as infection, pain, bleeding and, very rarely, paralysis or death. After Senza placement, potential side effects include allergy or infection, loss of pain relief, pain or uncomfortable stimulation, burns or device or component malfunction resulting in corrective surgery, lead replacement or device removal.
